

GPS video camera: Video stamp & watermark on video

Add GPS watermark on video, geotag video, GPS map stamp & timestamp on video

GPS Video camera is an app that will let you record some of your most beautiful and unforgettable movements and trips, with all the GPS coordinates such as date, time, location, latitude, longitude, altitude, magnetic compass, temperature, and much more information stamp on it.

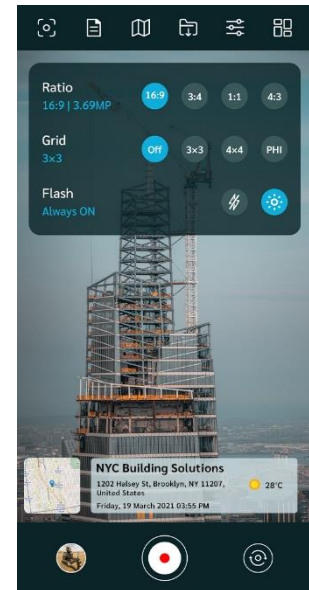

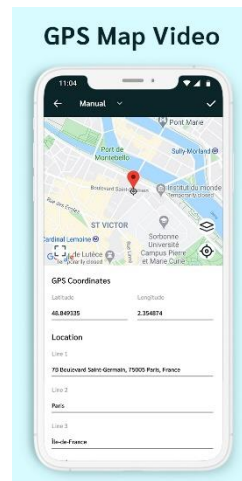

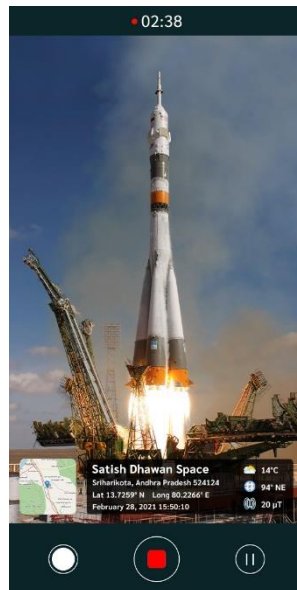

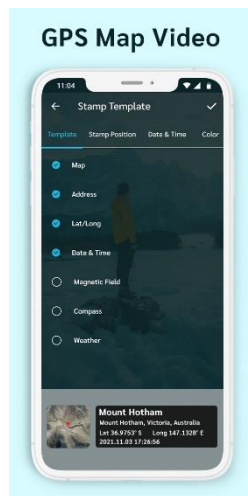

With a GPS video camera, you can not only monitor your location and routes in real time, but you can also record your trips and adventures while having all the geotags stamped on it. You can show your family and friends your Geo Location of Street / Place added videos and tell them about your favourite Earth travel memories.

When we explore the app's features, we can see that there are several features that will be beneficial to a wide range of users. For example, with the GPS video camera app, you can add Date Time, Map, Latitude, Longitude, Altitude, Weather, Magnetic field, and Compass to your camera videos.

Everything is contained within the single video. You can also manually add your location information to any video you record with your smartphone's camera app.

The app is compatible with devices running OS version 5.0 and up, the applications will make your work easier, so Save your location of the place you visited or travel, Share Location with videos having GPS Coordinates stamp, and keep exploring the new places with “[GPS video camera: Video stamp & watermark on video](#)” application.
